Rajan Maharjan

Senior iOS Developer | Flutter Developer

Kathmandu, Nepal | +977-9860124285 | rajanmaharjan123@gmail.com | linkedin.com/in/rajan1122

Professional Summary

Senior iOS Developer with 6+ years of experience designing, building and shipping mobile applications with Swift, UIKit and SwiftUI, plus cross-platform apps in Flutter. Led the full architecture revamp of a ride-sharing platform, raising App Store ratings from 2.8 to 4.0 (user app) and 2.2 to 3.2 (rider app). Built real-time communication features (WebRTC audio calling, video conferencing and AR-enabled screen sharing) for a US-based collaboration platform, and delivered fintech, e-wallet and remittance apps for Malaysian and Singaporean clients. Experienced in SDK development and integration, maps and location tracking, payment gateways and 3D/LiDAR scanning with RealityKit.

Technical Skills

- **Programming Languages:** Swift, Dart, JavaScript, C/C++ (Arduino)
- **iOS Frameworks:** UIKit (programmatic UI, Auto Layout), SwiftUI, Combine, Foundation, AVFoundation, ReplayKit, ARKit, RealityKit, Object Capture, RoomPlan, LiDAR, Core Location, MapKit, Core Data, APNs
- **Cross-Platform:** Flutter, Stacked state management
- **Architecture and Design Patterns:** MVVM, MVC, Clean Architecture, modular architecture, protocol-oriented programming, delegate and singleton patterns, legacy code migration
- **Real-Time Communication:** WebRTC, WebSocket, Janus Media Server, MQTT, gRPC, audio calling, video conferencing, screen sharing, real-time chat
- **Networking and Data:** REST APIs, URLSession, JSON/Codable, Protocol Buffers, push notifications
- **SDK Development and Integration:** XCFramework, Swift Package Manager, CocoaPods, IDEMIA SDK, KIBB SDK
- **Security:** End-to-end encryption, Keychain, biometric authentication, identity verification (eKYC)

- **FinTech and Payments:** E-wallets, cross-border remittance, eSewa, Khalti, Prabhu Pay, QR code payments
- **Performance and Debugging:** Xcode Instruments, memory leak detection, battery and location optimization, crash analysis
- **Tools:** Xcode, Git, GitLab, Firebase (Crashlytics, FCM), TestFlight, App Store Connect, Google Play Console, Postman, Jira, Adobe XD
- **Methodologies:** Agile, Scrum, code reviews
- **Hardware and IoT:** Arduino, ESP32, robotics, drones (UAV/UGV)

Work Experience

Senior iOS Developer

Sajilo Saathi | Kathmandu, Nepal | Aug 2025 – Present

- Led the complete revamp of the Sajilo (user) and Sajilo Rider (driver) ride-sharing iOS apps, single-handedly migrating a legacy codebase to a modular, high-performance architecture.
- Resolved critical issues in map rendering, real-time location tracking and payment integration.
- Optimized every core component for battery efficiency and location accuracy.
- Redesigned booking flows, earnings dashboards and rating interfaces from scratch.
- Raised the user app rating from 2.8 to 4.0 stars and the rider app rating from 2.2 to 3.2 stars through hands-on development and systematic bug resolution.

Freelance iOS Developer | Flutter Developer | Robotics Instructor

Self-Employed (Upwork and direct clients) | Remote | Nov 2024 – Present

- Built a LiDAR scanning app that produces 3D room layouts with dimensions for an Upwork client (LidarScanner).
- Developed an insurance calculator and QR scan app integrating eSewa, Khalti and Prabhu Pay (GIC Insurance).
- Designed and built a focus mode feature for Norvic Reset that locks the app for custom durations across multiple sessions and keeps the device on a single screen.
- Built ImaginAI, a Flutter text-to-video app that generates a voiceover script from a user prompt and attaches it to an AI-generated video.

- Developed a traditional dice game with 3D dice shaking and a clean Swift/UIKit interface.
- Led one-month hands-on Arduino and ESP IoT sessions, guiding students through real-world robotics projects.
- Coordinated with remote teams to deliver tasks against project objectives.
- **iOS projects:** GIC Insurance, BigFanz Business, BigFanz Customer, SIMAPP (SwiftUI), Tarmac (SwiftUI), LidarScanner (SwiftUI), Norvic Reset (SwiftUI)
- **Flutter projects:** ImaginAI, AdMonkey, Everest Grocery

Founding iOS Developer (Part-Time)

Virtual Tour Calgary | Calgary, Canada (Remote) | Apr 2024 – Present

Project: Evacuation Plan App (evacuationplanapp.com), an App Store app for iPhone, iPad and Mac that turns LiDAR scans into professional evacuation plans.

- Sole founding developer: designed, built and launched the app end to end, from architecture to App Store release and ongoing updates.
- Built multi-device support under a single account with real-time sync of projects across iPhone, iPad and macOS, so users can scan on iPhone and finish markup on iPad or Mac.
- Built LiDAR room scanning with Apple's RoomPlan API to generate accurate 2D floor plans from a single continuous scan, with options to hide furniture.
- Developed a markup editor with drawing tools for evacuation routes (Apple Pencil support on iPad), room labels and drag-and-drop safety icons for exits, extinguishers, alarms and first aid kits.
- Built a smart legend that lists only the icons placed on the plan, plus a mirror tool that flips layouts for identical adjoining units.
- Implemented customizable templates with white-label branding, company logos, emergency contacts, addresses and automatic safety warnings.
- Delivered A4 print preview, PDF and JPG export, printing and sharing, and a custom .evacplan file format for sharing projects.
- Built a pay-per-plan export credit system with in-app top-ups, serving fire safety companies, property managers, landlords and Airbnb hosts.
- **Tech stack:** Swift, SwiftUI, RoomPlan, ARKit, LiDAR, StoreKit, PDF generation, App Store Connect

iOS Developer | Flutter Developer

Vanilla Tech | Sep 2023 – Nov 2024 | Clients: Malaysian and Singaporean fintech products

- Developed and maintained iOS apps for Malaysian and Singaporean digital wallet and cross-border remittance products: Merchantrade Money, Valyou, Corporate Wallet, eRemit Malaysia and eRemit Singapore.
- Integrated the IDEMIA SDK for biometric identity verification, and revamped it by modularizing components, resolving issues and ensuring seamless integration.
- Fixed compatibility issues and migrated the KIBB iOS SDK to XCFramework for better performance and distribution.
- Built a Tourism App in Flutter using Stacked state management with refined UI design.
- Enhanced a Flutter fintech app with personalized currency features and intuitive reordering.
- **iOS projects:** Merchantrade Money, Valyou, Corporate Wallet, eRemit Malaysia, eRemit Singapore, IDEMIA SDK integration, KIBB SDK
- **Flutter projects:** Merchantrade Money Biz, Enrich Money, Tourism App

iOS Developer

Treeleaf Technologies | Client: Anydone (US-based) | Aug 2021 – Sep 2023

Project: Anydone, a real-time communication and collaboration platform for enterprise clients (iOS).

- Built real-time communication features in the Anydone iOS app, including one-to-one audio calling, multi-party video conference calls and screen sharing, using WebRTC, Janus Media Server and WebSocket.
- Developed AR-enabled screen sharing and interactive ARKit drawing tools for collaborative sessions.
- Built a real-time messaging system with end-to-end encrypted communication.
- Used MQTT, gRPC and Protocol Buffers for low-latency, reliable data transfer with reduced payload overhead.
- Developed a ticket management system to track and resolve customer issues.
- Implemented meeting calendar and scheduling features.
- Resolved performance bottlenecks and fixed memory leaks with Xcode Instruments, improving UI responsiveness and stability.
- Built user interfaces programmatically with UIKit as reusable, modular components.

- Worked in Agile sprints with remote backend, QA and product teams in the US, from planning through TestFlight and App Store releases.
- **Tech stack:** Swift, UIKit, WebRTC, Janus Media Server, WebSocket, MQTT, gRPC, Protocol Buffers, ARKit, AVFoundation, ReplayKit, MVVM, Git, GitLab

Flutter Developer

YarshaSoft Pvt. Ltd. | Aug 2020 – Aug 2021

- Designed and developed school management apps and the NVA app, and published them on Google Play.
- Integrated REST APIs and implemented push notifications for real-time communication with users.
- Tested and debugged apps to identify and fix issues before release.
- **Projects:** Ganesh Himal School, IJ Pioneer School, NVA

Flutter Developer Intern

OkayJourney Pvt. Ltd. | Jun 2020 – Aug 2021

- Designed the OkayJourney and Muskan apps in Adobe XD.
- Learned mobile app architecture, design patterns and UI/UX design.

Robotics Teacher

Prerana Vidhyashram | Apr 2019 – Oct 2019

- Conducted robotics classes and workshops covering core concepts and technologies.
- Taught Arduino programming, including sensor integration and motor control.
- Mentored students in completing their automation and robotics projects.

Team Member

GBS Team | Apr 2019 – Oct 2019

- Contributed to the development of a bomb disposal robot for the Nepal Army (Swabhiman).
- Worked on drone projects including surveillance, covering drone design and flight control systems.
- **Projects:** Swabhiman, UAV, UGV, multiple drone projects

Personal Projects

- **Langur Burja (Swift):** Digital version of the traditional Nepali dice game, with dice rolls triggered by shake detection or button press.
- **Magi3D Object Capture (Swift, RealityKit):** iOS app that creates 3D models from a mobile scan of any object using ObjectCaptureSession, with sharing.

Education

Bachelor in Electronics and Communication Engineering

National College of Information Technology (NCIT) | 2015 – 2019

Achievements and Activities

- **Swabhiman (Aug 2019):** Team member on a bomb disposal robot developed for the army, contributing to the safety of military personnel.
- **Aqua-bot Competition:** Developed and piloted an Aqua-bot that won the competition.
- **Event Organizer, Next Expo (Jul 2019):** Planned and ran hardware and robotics events.
- **Event Organizer, National Mechanical Exhibition (2015 – 2019):** Coordinated and executed exhibition events.
